Email Automation Add-on

Docsvault Email Automation Add-Ons can significantly improve your current ~~emailing and~~ email capture practices. With Docsvault's automated email intelligence, you can effectively capture, manage, archive and share organization-wide email communications easily. Whether you are looking for smoother capture and collaboration, effective email retention methods, ~~automated emailing capabilities~~ or compliance with government regulations, we have got you covered!

Automated Email Capture

Docsvault's Automated Email Capture is a smart way to capture, organize and index email communications and attachments. This is a perfect solution to automate the capture of new orders, faxes or project documents delivered by emails. You can set various capture rules to fetch desired emails from your company email servers, ISPs and even from services like Gmail, Hotmail & Yahoo and store them in neatly organized folders inside your central electronic repository. Captured emails are ready for sharing within your Document Management Software and can also trigger necessary workflows for further processing.

Say good bye to messy shared inboxes!

Email Archiving

Docsvault provides secure and reliable email collection and retention capabilities so you can archive and protect all company inbound and outbound emails. Email management and email archiving tools provide organizations with the ability to comprehensively store, classify and retrieve important business information necessary to comply with regulations such as HIPAA, SOX, SEC and Gramm-Leach-Bliley.

Bid farewell to your compliance worries!
