What's New in Version 3.5

Version 3.5 built 1175

» This minor updated build of Docsvault Pro v 3.5 fixes the bug of Docsvault PDF Print:

- Ability to use Docsvault PDF Printing under any user account in windows if the application was installed for all users.

Version 3.5 built 1172

» Pro edition is now Windows 7 compatible.

» A new PDF printer driver that works faster and better. Support for PDF printer under Windows Terminal Services.

» Bugs fixed:

- Scanner form did not open under a specific scenario.
- Fixed search results for data only searches for international regional settings that used '.' as a data separator.
- Ability to use Docsvault under any user account in windows if the application was installed for all users.
- Default property value was not visible in the drop down box in Import Dialog box while importing documents.

Version 3.5:

» Docsvault Pro v.3.5 release date 24 Mar'09 is compatible with Vista 64-bit.

» Completely rewritten indexing process: Full text indexer now uses the operating system's indexing engine. Resolved issues with some PDF iFilter versions for indexing OCRed PDF scans.

» New additions to the Scanning Interface:
- The scanning form can now be resized and even maximized for better visibility of scanned images.
- New navigation toolbar for scanned images with options such as Zoom In/Out, Fit to width/height, Previous/Next pages.

» New Index/OCR tab in options form displays status of Indexing and OCR processes.

» New 'Edit Profile' button in Docsvault's viewer to change profiles quickly with full view of scanned documents and images.

» Moving or importing files and folders inside Docsvault will now display list of files/folders that could not be moved for any reason. This means the import process will not stop prematurely if it encounters any error in accessing any file.

» Its now possible to change the email attachment's file name during importing using Outlook plug in.

» Now you can open the task directly for editing from the popup task reminder.

» Added support for German date format that uses '.' as date separator.

» Added option to checkout files for editing simply using double click.

» Even better memory utilization in thumbnail view.

» Minor issue related to appending and Merging PDF files resolved.
