

“What’s New”

Inbuilt PDF Editor:

Inbuilt PDF editor that can open and edit all types of PDF files. Users will be able to insert or edit text and images, put sticky notes, highlight text, and stamp any PDF file. It also features splitting, appending, extracting, exporting, reordering pages in any PDF file.

Optical Character Recognition (OCR):

The much awaited OCR capability has been added as an option that will seamlessly and automatically convert all your scanned files into searchable PDF files. This means that you will now be able to search for words and phrases that are actually inside your scanned files.

Thumbnail View:

This version introduces an immensely useful tiled thumbnail view that allows viewing of all image and PDF files in thumbnail views with variable thumbnail sizes. You can also browse through the pages of a multi page document right in the thumbnail.

Flag Files:

Flag files and folders for easy identification of special documents. Customize your own flags to support any document rules in your organization.

Other Features:

- Profile properties can now be displayed in the list view enabling users to sort and filter file lists using property values.
- Improved Batch Scanning allowing use of a blank page as a file separator to split the scan into multiple documents.
- Full text search now allows you to search inside OCR'd PDF & TIFF scans.
- It is not possible to combine multiple profile search criteria using the And/OR operators.
- Improved server and client connectivity.
- Faster profile/properties updates.
- Purge old documents before specified created or modified date.
- Added option to delete source file after successful import.
