

# API Integration

---

Docsvault allows organizations to integrate their 3rd party applications directly into the Docsvault document management system using **REST** based APIs. The **API add-on** helps organizations to access their centralized documents repository in other applications. Data exchanges are bidirectional - to and from any business application that is programmable or using a custom middleware.

## Highlights

- ✓ Exchange data with your CRM, accounting and other line of business software
- ✓ Import or export data in your Document Management software using simple API calls
- ✓ Create, update or search for documents and associated metadata in Docsvault from your applications
- ✓ Build powerful middleware applications to exchange data between legacy software
- ✓ Ensure smooth collaboration between all departments

## What it means for you?

One of the most significant benefit of API add on is improved productivity. The ability to import and retrieve all data into a single unified repository means all your data is synchronized and you gain better perspective and access to your company information. This feature also helps in product enhancement through improved scalability, performance and flexibility. API integration is one of the most useful tools for top line managers and supervisors who are responsible for overseeing more than one department.

## Fast facts

1. A must-have tool for top line managers who want all their data under one roof
2. Smooth flow of data ensures speedier completion of tasks
3. Better document management and retention capabilities means less worries
