

Manufacturing

Manufacturing industry is a challenging and dynamic industry, which poses challenges at all levels of project, right from new machines, materials and processes implementation, one has to constantly update documents to prove the operational excellence and help meet quality standards.

In manufacturing industry, factories have to churn out products in a controlled environment, making sure their products meet all compliance demands and are produced, dispatched and distributed on time.

Manufacturing business is always demanding and chaotic, making it very important that their back office is running smoothly.

To reduce the chaos and bring sanity in this industry, one needs more than a capable manager.

Challenges

Keeping up with changes

Too much chaos

Managing expenses

What are the challenges within manufacturing industry?

People in manufacturing businesses want their work to be done on time, with the allocated resources and without slightest of variation. This poses a big challenge to manufacturing business, but it can be eased by proper planning and management.

Keeping up with quality Changes

The document-related regulatory complexity for manufacturing organizations is higher than for most organizations. Manufacturers have to constantly update processes and maintain a long list of documentation to record changes.

Too Many Document and Versions

Typically, manufacturing businesses have to manage quality processes like CAPA, non-conformance, calibrations, customer complaints, and more. These processes need collaboration across departments. Inconsistent document handling across different departments also poses business risks if no uniformity exists to support information sharing, retrieval, or compliance. Ensuring everyone is working with the latest versions of documents is also key.

Managing Expenses

Just as in every other industry, it very important for manufacturing businesses to offer value for money as well as stick to the allocated budget despite escalating prices.

Solution

Incorporating a simple solution that offers technological as well as management support

Think about it...

How good it would be if you didn't have to worry about losing important contracts?

How much better your employees would perform if they didn't have to do mundane jobs?

How much money could you save if you didn't lose documents and spent money on reproducing them?

Document management software can help solve all these problems. This simple technological solution can allow all types of businesses to manage and collaborate efficiently and reduce chaos; manufacturing is no exception. This software also provides immense savings by reducing time and cost of doing backend jobs.

How can Document Management Software help?

Document Management Software provides support for a variety of operations like organizing and securing your data as well as coordinating with your colleagues, so that you can worry less about mundane backend jobs and focus more on other critical issues of business.

Docsvault, our super-efficient Document Management Software can help you do all these and much more.

Docsvault: Super-Efficient Document Management Software

Docsvault is an extremely efficient Document Management Software that can smooth out all document management tasks within manufacturing industry.

Apart from the obvious benefits such as more efficiency in handling documents, Docsvault can also help by making retrieval, collaboration and securing easier. This means there will be less clutter on your desk and you can get information quickly.

Let's see how Docsvault features can ease some of the challenges of manufacturing industry.

Improve Approval Processes

The timely approval of SOPs is very important. Automating the routing and approval of documentation using [Docsvault Workflow Management](#) helps in reducing document review cycle times. With Docsvault, company-wide policies, SOPs, and other documents that require inter-departmental collaboration can be managed electronically by routing documents along a predefined workflow. Automatic actions can be set on overdue tasks to keep processes in check.

Who is using Docsvault?

- Exxon Development, Inc., United States
- Farmers Marine, United States
- ConArt, Inc., United States
- Adtech Systems Inc., Canada
- Aristidis Benetatos, Greece
- AJ Lucas, Australia

“A good basic, no-fuss, cost effective solution to document management. After a lot of research we found Docsvault stood out from the rest when using this criteria”

- Phil Talintyre (IT Manager)

Automating Quality Processes

Docsvault provides for the automation of quality processes, like CAPA, non-conformance, customer complaints, and more. These processes, which are often form-based and unique to a department, can be designed using [Docsvault Web eForms](#) and automatic document workflows can be triggered on form submission – all under one on premise secured document management software.

Digital Signature for faster Approval and Quality Process

Docsvault allows authorized users to sign important documents ensuring completion of quality process and compliance with regulations. Organizations can easily collect signatures from employees, customers or other business associates with [Signature Requests](#), a web-based electronic signature solution. It cuts down delays in getting signatures and improves overall user experience.

Digitized paper records

Document's [integrated scanning](#) allows seamless and super fast scanning so that you can scan and store all the paper documents in a central repository for easy retrieval. Docsvault advanced capture solution automates the process of indexing and tagging documents, reducing the time and complexity for archive information.

Other benefits

- ✓ ISO compliant Document Control tools like Version Control, Security, Audit Trail and Alerts & Reminders avoid conflicts, data loss and control the quality
- ✓ Saves cost by reducing the space needed to store records
- ✓ Remote Access offers great flexibility to work and collaborate with each other remotely
