**Introduction**

Meggitt Training Systems, Canada chose Docsvault to improve document management and control in their organization to deal with high volume of data between their 50 users.

**Challenges**

Meggitt faced the following challenges prior to using Docsvault:

- Inconsistent file storage and difficulty in maintaining document versions
- Poor quality database for filtering information

**Solution**

Docsvault made it easier for them to centralize their document repository, access them efficiently among all users, and maintain document revisions with many more added benefits.

**Benefits**

Meggitt is a rapidly growing company that needed to manage its documents effectively and make them more usable. Docsvault helped them achieve just that and provided them with many other benefits.

Docsvault’s advanced storage options and easy to use interface helped them transition over to Docsvault filing system easily. Audit trail helped them keep a track of what had been done, by whom and when. Through version control, they can now look into previous versions of any document very easily.

File and folder description feature allow them to accurately describe the contents of the folder without making filenames unnecessarily lengthy. They are able to create folders that are like databases (Tables) using indexes; now all their databases are in one location, under control and act all the same way.
