

## Microsoft Teams Integration

Microsoft Teams is becoming one of the most used collaboration tool across the globe. Docsvault's integration into MS Teams allows you to share and collect information within your organization directly to and from the Docsvault repository.

### Highlights

- ✓ Share single or multiple documents in Docsvault within any MS Teams channel or chat
- ✓ Collect documents directly into the Docsvault repository using drag-n-drop interface from within Teams
- ✓ Host Docsvault forms in MS Teams channels and collect data directly in Docsvault repository
- ✓ Share Docsvault Forms Submission Reports within MS Teams channel

### What It Means For You?

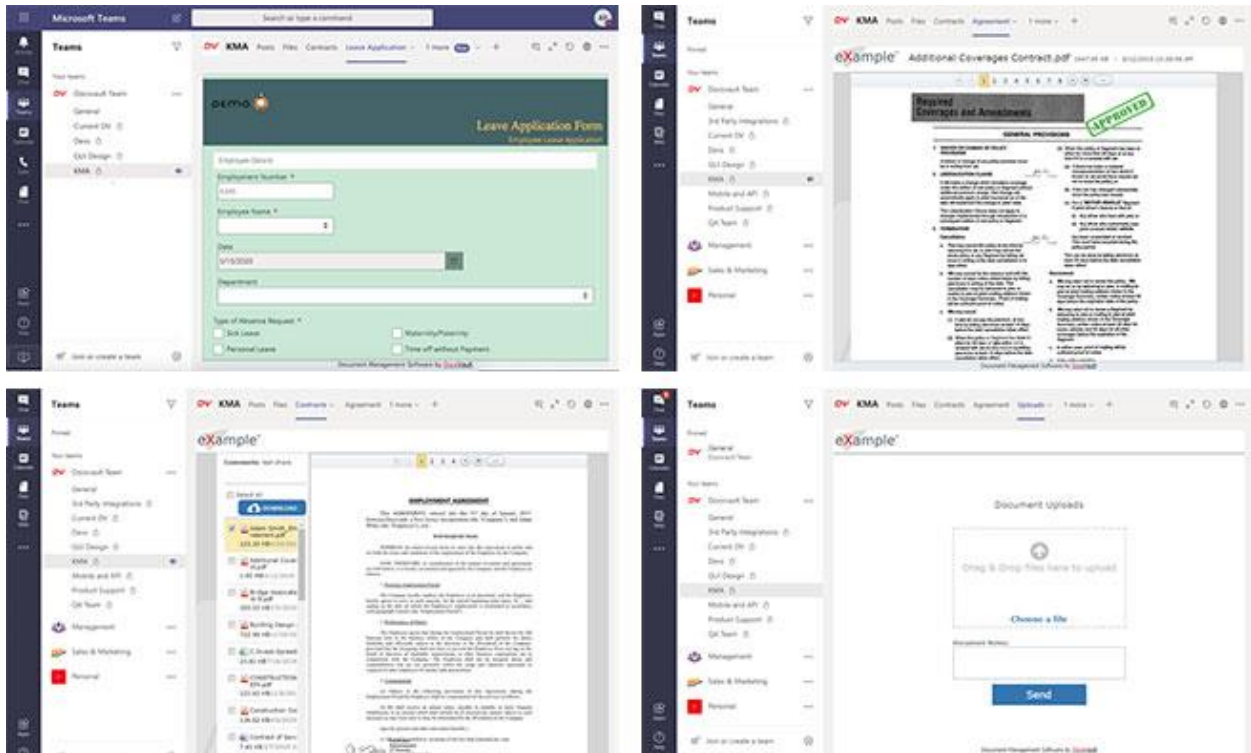

You can now share your Docsvault documents and eforms in Teams channels so users can collaborate on important documents from within Teams directly. Your team members can submit Leave Applications, Purchase Authorizations, Expense Reimbursements, etc. without leaving Teams. This means more time saved and greater efficiency at your workplace.

### Solutions

- *Improved Productivity*  
Seamless integration with MS Teams application saves a lot of time.
- *Fast User Adoption*  
No need to train users as they can work in applications with which they are already familiar

### Other Integrations

- *Active Directory Integration*  
Use Active Directory Integration and access the documents contained within the repository using Windows login and password.
- *Microsoft Office Integration*  
Save, share, review and manage all Word, Excel and PowerPoint files as well as Outlook emails.

**Microsoft Teams Integration**

*Fast Facts*

1. *Share as many documents as you want*
2. *Add Forms or documents to any channel or chat*
3. *Easy access to Docsvault resources for all team members*
