

Docsvault Web Interface

In today's information driven world, getting to your documents using an **online document management system** from anywhere is a key to maintaining your edge. Docsvault's desktop clients allow quick access to documents hosted on your server when you are in your office. However, in the current fast paced environment, businesses also require access to their information while their workforce is on the road or when working from home.

Docsvault's Web Interface gives you the freedom to work from anywhere using any standard web browser while still keeping your data in your control. Users can search for and collaborate on their documents using the same powerful desktop interface - now inside their web browsers.

Highlights

- ✓ Makes your documents available online 24 x 7 with banking grade security
- ✓ Allows you to stay updated on tasks and events while on the go
- ✓ Easy to use; similar to Desktop client in appearance and functionality
- ✓ Docsvault repository is hosted on your own server so your information stays with you under your full control
- ✓ No need to email yourself copies of important documents to access them outside your office
- ✓ No software to install to access your document repository
- ✓ **View file's contents before opening with built-in Document Preview**

What It Means For You?

Imagine you are sitting somewhere in California with a client and you want an important document in your New York office. What if you are at the airport or at home and quickly need to complete few task in Docsvault? If you think about it, you run into such situations many times.

Solutions

- **Online Document Management**
Docsvault's Web Module allows you to manage your documents online so that you are never detained from accessing your documents.

- **Improved Collaboration**
Improve collaboration with team members on the road, while working from home and with customers by shortening response times.

- **Round-the-clock Control**
Stay in control of your information with email notifications and alerts even when you are outside the office.

With Docsvault's Web Interface there is no need to wait or trust faulty methods of collaboration. Answer that client query, finish up that report or move that workflow process forward – no matter where you are.

Online Task Management

Docsvault's Web Interface also allows full access to your routed documents and tasks. Stay updated on your incoming tasks, follow up with tasks you assigned to others, or check off your personal tasks. With online access to your tasks you can accomplish all your task management routine even while not in the office.

Share Documents Online

With proper rights, Docsvault allows you to create online public links from the Web Interface. So no matter where you are, you can create public URLs of files or folders easily and share them with anyone you want. Public links can be secured with a password and can be set to expire on desired date.
